## ADVISORY FOR FISH CONSUMED

The Illinois Department of Public Health advises that persons who eat salmon or trout taken from Lake Michigan limit their consumption of these fish. The advisory was issued following a review of the levels of polychlorinated biphenyls (PCB's) and other chemicals in Lake Michigan salmon and trout. The advisory applies to coho and chinook salmon and to lake, brown and rainbow trout that weight five pounds or more.

Consumption of fish weighing five pounds or more should be limited to one-half pound per week. Women who anticipate pregnancy, or who are pregnant or lactating; and young children, particularly those of preschool age, should not eat any of these fish regardless of the size of the fish.

The advisory does not apply to fish that weight less than five pounds as the higher levels of PCB's and chlordane are found in the older, larger fish. Lake Michigan salmon and trout that weigh more than five pounds are expected to contain PCB levels of more than two parts per million and chlordane levels higher than 0.3 parts per million. These levels are the maximum acceptable tolerances as established by the U.S. Food and Drug Administration. Illinois has adopted the federal recommendations.

The recommended consumption of no more than one-half pound per week was established for fish that are prepared in ways that will reduce the intake of chemical contaminants. Prepare the fish by removing all excess fat, especially the belly and dorsal flaps, before cooking. Fish should be boiled or baked on an elevated rack so that any additional fat will drip off. The fat contains the highest concentration of pesticides, so the fat that drips off during cooking should be discarded and not used in anything edible. Fish may also be boiled or poached, but all broth should be discarded.

Even though the long-term effects of exposure to PCB's and chlordane have not yet been determined in detail, it is advisable to limit consumption of the chemicals.

## Areas Open To Snagging

Snagging for chinook and coho salmon only is permitted from the following Lake Michigan shoreline areas. Dates for this snagging will be announced publicly by the Department of Conservation. No snagging is allowed at any time within 200 feet of a moored watercraft or as otherwise posted.

(1) Lincoln Park Lagoon from the Fullerton Avenue Bridge to the southern end of the Lagoon; (2) Waukegan Harbor; (3) Discharge channel and bay area formed by the landfill at Northwestern University, Evanston (not in Lagoon); (4) Winnetka Power Plant discharge area and the Waukegan Power Plant discharge area; (5) Jackson Harbor (inner and outer harbors)

## Charter Boat Fishing On Lake Michigan

Charter boats are available for salmon and trout fishing on half and full day trips April through October. For further information, call the Department of Conservation's Chicago Office, 312/793-2070.

## MEASURE YOUR CATCH

Use a flat board; close the mouth, and compress the tail.

## SPORT FISH CONTAMINANT ADVISORIES

In addition to the "Advisory for Fish Consumed" (see above section), the Illinois Department of Public Health is advising the general public to limit their consumption of fish that weight more than one-half pound per week for channel catfish from Clinton Lake, carp, channel catfish from Lake Decatur; carp, channel catfish, and buffalo from Lake T., and channel catfish from Paris Lakes.

For more specific information on these advisories you should contact the Illinois Department of Public Health or the Department of Conservation.

# Fishing Guide To Cook County Forest Preserve Waters

de list of Cook County forest preserve waters open to public fishing and also the location, size, depth and principal kinds of fish in each water. Where available, public transportation is also noted. Depth contour maps of many lakes in the Forest Preserve District have been completed and are available upon request from: Cook County Forest Preserve District, Conservation Department, 536 N. Harlem Ave., River Forest, Illinois 60305. Others are being worked on. We hope to have all of the major water areas mapped in 3 or 4 years.

## FISHING REGULATIONS

The Cook County Forest Preserve District works closely with the Illinois Department of Conservation in managing these waters for hook and line fishing. With one major exception, State rules and regulations hold true for fishing in the preserves. The exception: Bow and arrow fishing for rough fish is not permitted in the preserves. All waters in the forest preserves are designated fish preserves. Fishermen are limited to two lines with no more than two hooks per line and no trolley lines.

Special regulations regarding bag and size limits imposed on designated waters will be posted at the waters.

A valid Illinois hook and line fishing license is required except for persons who are under 16, disabled or blind, or over 65 years of age. In addition, anyone required to have a valid fishing license must have a State trout and salmon stamp when fishing for trout within the Forest Preserve District trout lakes.

Daily limits, length limits and closed seasons have been removed from all fish found in forest preserve waters, with three exceptions. These are: no more than 6 largemouth bass or smallmouth bass, regardless of size, may be taken in one day; no more than 3 northern pike may be taken in one day (and these must be 24 inches long or longer); and no more than 5 trout may be taken in one day. Use of minnow seine is not allowed except in the Des Plaines River for bait collecting.

Special Forest Preserve Regulations regarding size limits on bass will be imposed on designated waters of the District and these special rules will be so posted. These experimental regulations are to prevent the excessive removal of bass, and to improve the fishing through protection of our major predator fish. We ask the fishing public to respect and obey these regulations on lakes so posted.

Ice Fishing is permitted on designated forest preserve lakes during winter months when the ice has become 4 or more inches thick. Public announcements are made in the news media when conditions permit such fishing and which lakes are open during each year.
